Ninth Edition

Tenth Edition

Reasons for Studying Concepts of Programming Languages

- Increased ability to express ideas
- Improved background for choosing appropriate languages
- Increased ability to learn new languages

Course Learning Outcomes (CLO)

- Determine programming domains
- Determine language evaluation criteria
- Determine the major programming language paradigms
- Explain the issues involved in the design and implementation of programming languages
- Show the general problem of describing syntax
- Identify principles of formal language theory
- Identify and apply principles or regular expressions
- Show how to use the attribute grammars
- Describe the meanings of programs

CLO (Cont')

- Identify issues related to the concept of binding
- Identify issues related to the type checking, strong typing and type compatibilities
- Identify issues related to the scope and lifetime
- Identify issues related to the concept of data types
- Apply fundamental programming language elements of expressions
- Apply fundamental programming language elements of expressions in selection statements and iterative statements
- Ability to understand the concepts of the subprogram

Course Assessments and Grade Distribution

Course Assessment Tools	Percent
Quiz 1	5
Quiz 2	5
Midterm Exam1	20
Project	20
Lab Assessment	20
Final Assessment	30
