

Question 1 Essay Answers

Find the result of the following SQL statement:

```
select Name, Occupation
from Table1
where age= 42
```

Table1:

Name	Address	Phone	Age	Occupation
Martin Chase	123 Blue St	555 1212	42	Teacher
Sylvia Norton	455 Cork Lane	555 1478	35	Chef
William Telfer	301 Drabb Court	555 5658	29	Pilot
Abigail Waters	694 Cat Street	555 8974	30	Veterinarian
Susan Wigg	23 Plaster Place	555 8236	52	Homemaker

[2.5 marks]
[SO3, CL07]

Unary operation
select operation use age 42
from Table1

1.2 Define the following Database terminology:
Database, Expert Systems.

[2 marks]
[SO3, CL07]

- ① Database: collection of related data or organized
- ② Expert: Rely on detailed and depth knowledge of experts

1. The systems analysis:
A. Determine information system requirements
C. Manage project according to plan

B. Develop software system
D. Conduct a management strategy

2. In rapid application development (RAD),
A. Active user involvement
C. Less formality in communication

B. Prototyping and repeated testing
D. Use of the IDE

3. In converting systems, implementation can be done in different ways:
A. Parallel conversion
C. Direct conversion

B. Step conversion
D. Punctuated conversion

4. We identify the systems development goals in the _____ phase of the life cycle.

A. design
C. analysis

B. planning
D. implementation

5. The maximum amount of data transmitted through a communication channel at one time is called:

A. Throughput
C. Streaming

B. Bandwidth
D. Band

6. How to protect your computer systems privacy at home.

A. Don't save account numbers or passwords
C. Use strong passwords

B. Verify that devices have secure configurations
D. All of the above

7. The process of transforming data into a digital form is:

A. Communication
C. Digitization

B. Analog
D. None of the above

8. Links computers in a limited geographic area

A. Local Area Network (LAN)
C. Wide Area Network (WAN)

B. Personal Area Network (PAN)
D. Campus Area Network (CAN)

Question 3 True & False

[10 marks]

Write (T) if the statement is TRUE, and (F) if the statement is FALSE

	Database is a collection of related data organized so it is easy to access, manage, update, group and summarize.	
1	Object-oriented database management systems are suited for applications such as hospital patient record systems.	
2	System analysts must Communicates to management strategies.	F
3	In the Waterfall Model, too many changes can cancel the project and the team would need to start over.	T
4	Security is an interwoven element that is addressed at each phase of systems development life cycle.	T
5	The system development life cycle (SDLC) phases should be completed in order with the results of one phase becoming the starting point for the next phase of the cycle.	
6	Metropolitan area network is larger than a wide area network, smaller than a local area network.	
7	Physical address is the unique name assigned to each node on the network.	
8	Voice over Internet Protocol offers computer-to-phone and phone-to-phone transmission through the Internet.	
9	Wiring closets in networking are houses wiring that supports most types of data transfer needed.	
10	Streaming is the ability to hear or see content while it is being downloaded from a website.	
11	System analysts must Communicates to management strategies.	F
12	In the Systems development life cycle phases, each phase must provide a deliverable or outcome that often serves as the input for the next phase.	
13	In the Waterfall Model, too many changes can cancel the project and the team would need to start over.	T
14	Security is an interwoven element that is addressed at each phase of systems development life cycle.	T
15	Direct broadcast satellite: Consumer satellite technology that receives digital TV signals through a reception dish.	
16	Each cellular network includes multiple mobile switching centers (MSCs) that control communication within a set of cells.	
17	SPAM: Unsolicited messages sent in bulk over electronic mailing systems.	
18	Cybercrimes are crimes perpetrated (performed) through the Internet.	
19	Cookies: Small files written to your hard disk by websites visited.	
20		

Question 4 Multiple Choice

[11 marks]

9. Expansion board or adapter that provides a connection between the computer and the network.

A. Physical Address

B. Network Interface Card (NIC)

C. Logical Address

D. None of the above

10. Ensure that the modem can communicate with another modem, even if by a different manufacturer.

A. Modulation Protocols

B. Transmission Control Protocol (TCP)

C. Internet Protocol Suite

D. Voice over Internet Protocol (VoIP)

11. Database management systems (DBMS).

A. Able to present information in reports and other formats

B. Manages, accesses, stores, and edits data

C. Connects several files or tables

D. All of the above

Good luck and best wishes.
