

Calculated Grade
13.80

Which of the following is not a primitive data type for C programming language?

- ☐ float
- ☐ char
- ☐ integer
- ☒ boolean

The following Ada program runs normally and does not generate an error:

```
type color is (red, blue, green, white, black);  
subtype bicolor is Days range white..black;  
c1: color;  
c2: bicolor;  
c2 := c1;
```

- ☐ True
- ☒ False

Given the following piece of code of C language:

```
int c= -3%5;
```

what is the value of c?

Find the output of the following C language code :

```
#include "stdio.h"

union data{
    struct Bits{
        unsigned int x1:1;
        unsigned int x2:1;
        unsigned int x3:1;
    }bits;
    int y:3;
};

void main()
{
    union data d1;
    d1.y =7;
    d1.bits.x2=0;
    printf("%d ",d1.y);
}
```

Given the following piece of code of C language:

```
#include <stdio.h>
int main(void) {
    int x=26;

    int y = (x=0 && x++/3);

    printf("%d\n", x);

    return 0;
}
```

What is the output ?

What is the value of the following Ada expression:

```
integer(53.99)
```

Given the following piece of code of C language:

```
#include <stdio.h>
int main(void) {
    int x=101;

    int y = (x>0 || x++/3);

    printf("%d\n", x);

    return 0;
}
```

What is the output ?

Question 20

Given the following piece of code of C language:

```
float f = 80/15;
```

what is the value of f?

5.000000

or 5,0

Given the following piece of code of Perl language:

```
$c= -1%5;
```

what is the value of \$c?

4

The above C declaration defines **p** to be :

```
struct node {  
    int x;  
    float y; };  
struct node p[10];
```

- ☐ A structure of 10 fields, each field being an array of 2 elements
- ☐ An array, each element of which is a structure of type node
- ☐ A structure of 2 fields, each field being an array of 10 elements
- ☒ An array, each element of which is a pointer to a structure of type node

Given the following piece of code of Python:

```
a,b,c= 15*3,15**79, 15 -3
```

what is the value of c?

What is the value of the following APL expression:

```
10*3+2
```

Given the following piece of code of C language:

```
int c= 23%7;
```

what is the value of c?

What is the value of the following Lisp expression:

```
(* (+ 9 5) 10)
```

What is the value of the following Python expression:

```
2**3**0
```

Given the following piece of code of C language:

```
#include <stdio.h>
int main(void) {
    int x=178;

    int y = (3>1 && x++/3);

    printf("%d\n", x);

    return 0;
}
```

What is the output ?

Which of the following is not an ordinal data type for Java programming language?

- ☐ integer
- ☐ boolean
- ☐ char
- ☒ float

What is the value of x in the following Python expression:

```
x = 13 //3
```

Given the following piece of code of C language:

```
int x= 3;  
if (x=1)  
printf("%d",x+1);  
else  
printf("%d", x-1);
```

What is the output?

For Python programming language, give the output of **findall** regular expression function with `<div>(.*?)</div>` parameter for the string `S1`
`S1 = '<div>Article title </div><div><main> text body </main></div>'`

- ☐ ['Article title']
- ☐ ['Article title', 'text body']
- ☐ ['<div>Article title </div>','<div><main> text body </main></div>']
- ☒ ['Article title', '<main> text body<main> ']

What is the value of the following Matlab expression:

$2^3 \wedge 0$

What is the value of x in the following Python expression:

$x = 29 \text{ if } 8 > 81 \text{ else } 29$

Question 2

What is the value of x in the following Pascal expression:

$x := 30 \text{ div } 8;$

Question 1

What is the value of the following C expression:

$39 > 32 > 70$

Question 2

What is the value of x in the following Pascal expression:

x := 30 div 8;
