

Question 1: Answer the following questions:

{ / 9 }

1. List four IT careers that are popular in 2025?

[2 Marks]

- 1.
- 2.
- 3.
- 4.

2. List two of the advantages of digital technology.

[2 Marks]

- 1.
- 2.

3. List the five basic functions of the Operating System?

[2 Marks]

- 1.
- 2.
- 3.
- 4.
- 5.

4. List the Six Steps of Booting a System.

[3 Marks]

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.

Question2: Fill in the blanks:

| / 4 |

<i>Digitization</i>	<i>Integrated Circuit</i>	<i>encrypting</i>	<i>Digital compression</i>
<i>Noise</i>	<i>Sampling</i>	<i>Signal</i>	<i>Digital information</i>

1. The process of converting information to a binary form is called ().
2. () is the process of recording an analog signal at regular discrete moments of time.
3. A () is used to transport bits physically across a transmission medium.
4. () is a technology used to fabricate large number of transistors in a thin layer of semi-conductor material.
5. () is defined as an unwanted occurrence that creates interference with a signal.
6. () may be transmitted and processed faster than analog information.
7. () is used to reduce the amount of stored data without losing the content.
8. Digital systems can protect sensitive information by () the information.

Question3: Match each item in column A to its appropriate item in column B [/ 5]

A		B	
[]	Blog	1	Provide methods for packing and transmitting information
[]	Browser cache	2	Web page acts as gateway to present sources in an organized way
[]	Web browser	3	Programs that roam the web to add new web pages to search engine indexes
[]	Portal	4	Stores web page files on a computer when the user visits a site for the first time
[]	Spiders	5	Program that displays web pages and linked items
[]	Paging	6	Method to transfer files over the internet
[]	TCP/IP	7	Internet equivalent of a journal or diary where users post opinions and thoughts.
[]	FTP	8	Transferring files between RAM and the hard disk.
[]	Multitasking operating systems	9	Copies data found on the hard disk to a backup device.
[]	Backup software	10	Permit more than one application to run at the same time.

Question4: Write True (T) or False (F) against each of the following statements:

1	Information is any knowledge that comes to our attention.	
2	Network access points allow data to start on one network, then cross over to another network.	
3	The Internet is a global system of computers of thousands of privately and publicly owned computers and networks.	
4	Routers are specialized devices that connect networks, locate the best path of transmission, and ensure that data reaches its destination.	
5	Interoperability is the ability to work with different brands and models of computers.	
6	Transmission Control Protocol (TCP) handles the address part of each packet so that it gets to the right destination.	
7	Hypertext uses links to connect to additional related information.	
8	Plug-ins are additional hardware programs to extend the ability of the browser.	
9	Browser cache stores Web page files and graphics on a computer hard drive when the user visits a site for the first time.	
10	Aggregator: Regularly checks each site on your subscriptions list and sends alerts if new information has been published.	
11	Kernel: The graphical parts and executable programs of the OS.	
12	OS gives each program a portion of RAM memory and keeps them from interfering with each other.	
13	Bit is the smallest piece of data a computer can work with.	
14	Computers convert binary numbers into hexadecimal (hex) numbers. Which use the numbers 0 through 9, followed by letters A through F.	
15	Control unit inside CPU is responsible about performing arithmetic and logical operations.	
16	Data bus is a is group of parallel wires that connect the CPU's internal components.	

Question5: Choose the correct answer in the following sentences:

1. The information-processing cycle consists of four basic operations: input, processing, output, and storage.

- | | |
|---------------------|-----------------|
| A. Input and output | B. Processing |
| C. Storage | D. All of above |

2. They are systems of hardware and/or software that capture, process, exchange, store and/or present information using electrical, magnetic and/or electromagnetic energy.

- | | |
|------------------------|-----------------------------|
| A. Information Systems | B. Information Technologies |
| C. Storage | D. All of above |

3. An electronic switch that could be controlled electronically just like a mechanical switch.

- | | |
|----------------|-----------------------|
| A. Transistor | B. Integrated Circuit |
| C. Cooling Fan | D. None of above |

4. Handles the address part of each packet so that it gets to the right destination.

- | | |
|----------------------------------|---------------------------------|
| A. Transmission Control Protocol | B. Hypertext Transfer Protocol |
| C. Internet Protocol | D. Voice over Internet Protocol |

5. Contains prerecorded instructions to start the computer.

- | | |
|---------------------------|-------------------------------|
| A. Read Only Memory (ROM) | B. Random access memory (RAM) |
| C. Cashe Memory | D. Virtual memory |

6. Printed circuit board that contains the electrical circuitry for the computer.

- | | |
|-----------------------|-----------------------|
| A. Motherboard | B. Cooling Fan |
| C. External Drive Bay | D. internal Drive Bay |

7. Determines what the program is telling the computer to do.

- | | |
|------------|-----------|
| A. Fetch | B. Decode |
| C. Execute | D. Store |

8. The factor that affect the performance of a CPU.

- | | |
|-----------------------------------|-----------------|
| A. Number of existing Transistors | B. Clock speed |
| C. Data bus width and word size | D. All of above |

GOOD LUCK
